<input type="checkbox"/> Fork-tailed Storm-Petrel *						

Notes

Field Checklist of The Birds of Baja California, Mexico

This checklist contains 541 species of birds that have been recorded in Baja California Peninsula, Mexico.

The species list conforms to the American Ornithologists' Society (AOS), checklist order and nomenclature as of the 60th supplement published July 2019.

Statuses are general and cover the entire peninsula, a species unexpected in southern Baja may occur with regularity in northern Baja or vice versa. For example, Tricolored Blackbird is regular in Baja California, but unrecorded in Baja California Sur, therefore Tricolored Blackbird is not considered rare for the peninsula.

- * = Accidental, not to be expected, very few records.
- # = Very rare, generally less than annual, not unexpected
- (int)** = Introduced
- (ex)** = Extirpated or Extinct previously bred or presumed to have bred in Baja, but no longer occurs naturally. They may have been re-introduced but remain un-established.

Species or subspecies marked with an asterisk or pound sign (*, #) should be documented with photographs and or written details.

Documentation of unusual species should be sent to North American Birds regional editor, Baja Peninsula
